

HotelStudio

The hospitality industry is dynamic and rapidly growing. As more and more people travel both locally and internationally, service providers have a growing need to properly manage their day-to-day activities.

Drawing from over 5 years' experience, [Lasahara Systems](#)' team of programming professionals has developed a comprehensive system that will greatly enhance your establishment.

Overview

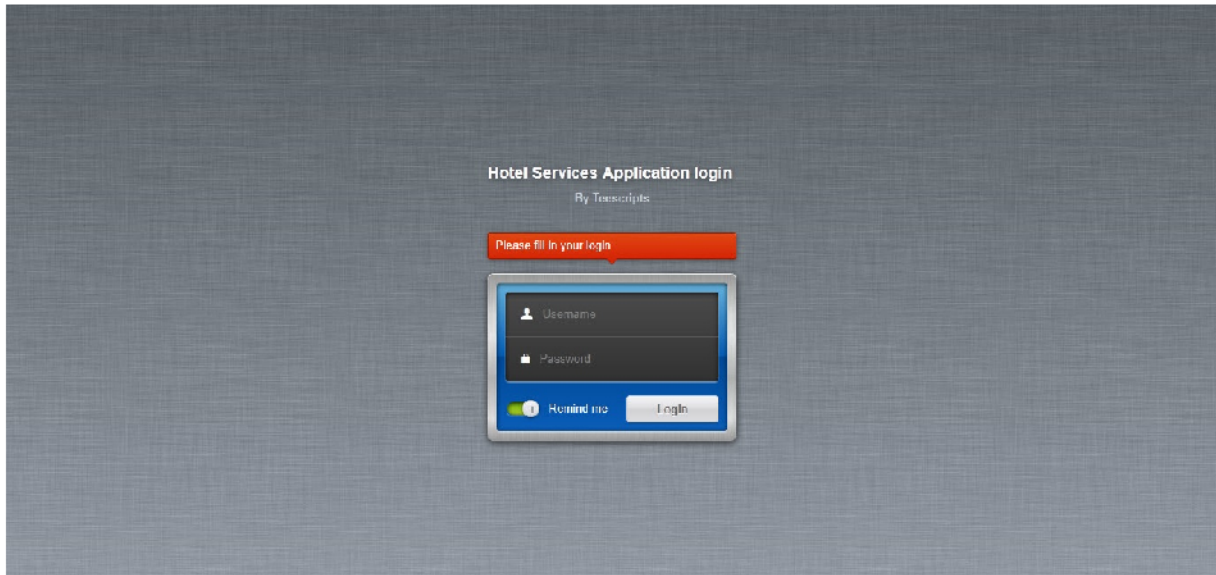

Hotel Studio is powerful yet user-friendly software that provides quick and easy management of all hospitality services including restaurant & bar services, kitchen activities, reservations & bookings, rentals & facilities and clients.

It also allows users to keep track of stock by viewing a detailed usage graph showing peaks for individual items.

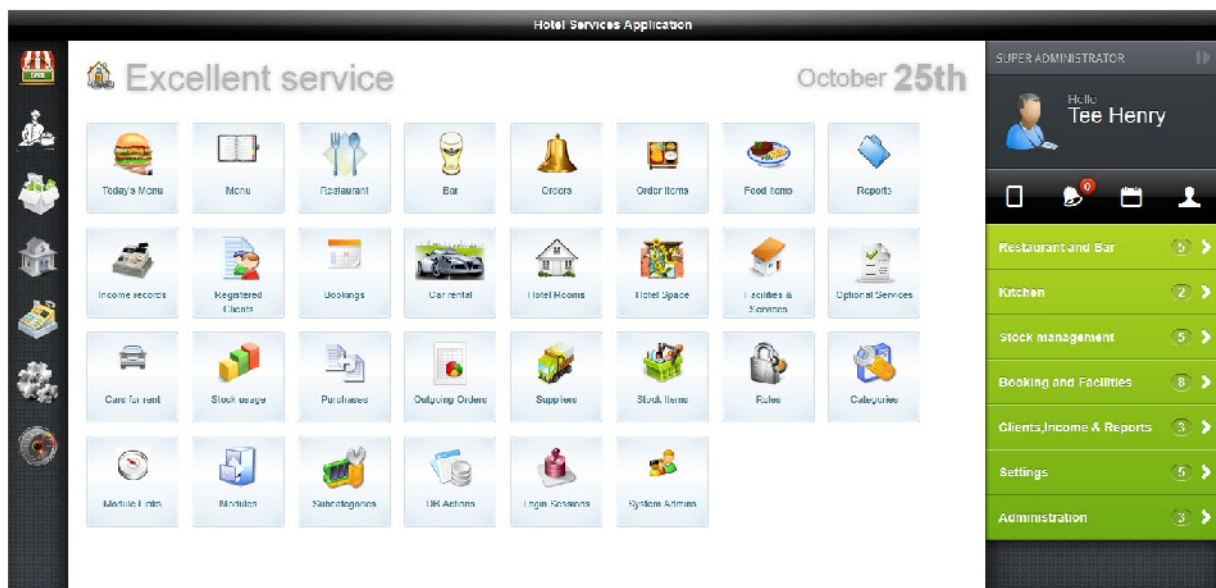

Hotel Studio is everything you need to properly manage your hotel establishment.

Features

- **Secure login** – User authentication is provided by a username & password that must be correctly entered in order to gain access to the system.

- **Home screen** – From the home screen users can quickly and easily navigate to any module.

- **Interface – Hotel Studio** has a bright, vibrant and attractive interface.

- **Bookings and Facilities** – Provides management of bookings, car rentals, hotel space bookings and management of other optional facilities and services within your establishment.

- **Clients, Income & Reports** – View graphical stock usage reports for all or individual items by month, year or specific dates. View and Edit Income reports by month, year or specific dates and edit and search clients registered with your establishment.

Architecture

Hotel Studio was developed in PHP programming language powered by JavaScript which makes it a multi-platform application capable of running both locally and online.

- *The Hosted Solution*
Hosted **Hotel Studio** runs on a web server and allows remote access through the internet, automatic data backup onto server, is secure and allows easy sharing.
- *The Local Solution*
Local **Hotel Studio** runs on a local server thus eliminating hosting costs and consolidating download speeds. Local server software such as XAmp is installed on the local server to enable running of the system.
